Tieline Unveils Gateway Multichannel IP Codec at IBC

Perth, Western Australia, September 11th, 2019

At IBC2019, leading audio codec manufacturer Tieline will unveil the new Gateway IP audio codec, which is a compact and powerful multichannel IP audio transport solution for radio broadcasters. The Gateway streams up to 16 IP audio channels with support for AES67, AES3 and analog I/O as standard.

Featuring Tieline's revolutionary SmartStream PLUS redundant streaming and Fuse-IP data aggregation technologies, the Gateway heralds a new era in multichannel IP codec streaming.

"The new Gateway codec delivers up to 16 mono channels or 8 stereo streams of IP audio in 1RU to increase efficiency and reduce rack space requirements," said Charlie Gawley, Tieline's VP Sales APAC/EMEA. "The Tieline Gateway

interfaces with legacy analog and AES/EBU sources, as well as newer broadcast plants with AES67 IP audio infrastructure. An optional WheatNet-IP interface will also be available."

Tieline Gateway is perfect for STL, SSL and audio distribution applications, as well as managing multiple incoming remotes at the studio. Its feature-rich and compact design is interoperable with all Tieline IP codecs and compatible over SIP with all EBU N/ACIP Tech 3326 and 3368 compliant codecs and devices.

Configurable through an embedded HTML5 Toolbox Web-GUI interface, the Gateway can also interface with the Tielink Traversal Server for simpler connections and is fully controllable using Tieline's Cloud Codec Controller.

See the Tieline Gateway at the Tieline booth in Hall 8, Booth E74 at IBC. To make an appointment with Charlie Gawley email c.gawley@tieline.com.au. For more information visit www.tieline.com.
